AMAC Action Statement of Support for H.R. 6130, the Alzheimer's Screening and Prevention Act

AMAC Action strongly supports HR 6130, the Alzheimer's Screening and Prevention Act. Alzheimer's disease is a serious and growing public health challenge that affects individuals, families, caregivers, and communities across the country. Expanding opportunities for early screening and improving access to information and preventive care can help individuals and their health care providers identify potential concerns sooner and make informed decisions about care and treatment. By encouraging greater awareness and supporting earlier identification, HR 6130 has the potential to improve health outcomes, help families plan for the future, and reduce some of the burdens associated with late diagnosis. AMAC Action is proud to support this legislation.
